EXPERIMENT

Title

DOG AGE

Description

Max has a dog, which is an integer N years old. Now he wants the age of his dog in human years. The internet says that 1 dog year equals to 7 human years. Your task is to find and return an integer value representing the age of Max's dog in human years.

Input Format:

input1: An integer value N representing the age of Max's dog

Output Format:

Return an integer value representing the age of Max's dog in human years

Example:

Input:

4

Output:

28

Source Code:

```
def dog_year(N):  
    M = N * 7  
    return M  
  
N = int(input())  
print(dog_year(N))
```
